

UJWAL UMESH DANGI

Senior PHP Laravel Developer | Backend API Specialist | Java Spring Boot Developer

Chembur, Mumbai, India | +91 7738605499 | ujwaldangi335789@gmail.com | ujwaldangi.github.io/portfolio/

PROFESSIONAL SUMMARY

Senior Backend Developer with 4 years 9 months of experience building secure, high-load API platforms, automation workflows and enterprise integrations across fintech, broker technology, healthcare, pharma and education domains. Strong production expertise in PHP, Laravel, REST APIs, JWT/Sanctum, Redis, AWS SQS, queues, SQL/stored procedures, Swagger/OpenAPI, Telescope, TCPDF, PHP GD Library, WhatsApp chatbot integration and production debugging. Hands-on Java Spring Boot exposure through enterprise-style backend modules covering food-ordering/e-commerce workflows, 200+ table relational design thinking, role-based admin operations, SP-driven reporting, bill/invoice workflows, delivery partner assignment, payment gateway flow design, inventory/menu management and layered API architecture. Delivered and maintained 400+ APIs across 90+ client integrations including Paytm, PhonePe, NJ, Axis Bank, HDFC Bank, Dhan, CoinSwitch Kuber, KIFS, Indira and Geojit.

CAREER IMPACT SNAPSHOT

400+ APIs Delivered	90+ Client Integrations	High-Load Backend Design	Security-First Development
Laravel API ecosystem for fintech and broker operations.	Enterprise integrations across broker, fintech and platform clients.	Redis, queues, async jobs and Apache tuning for heavy traffic.	JWT/Sanctum, MFA, IP binding, rate limiting and API logs.

TECHNICAL EXPERTISE

Backend & APIs: PHP, Laravel, Java, Spring Boot, Spring MVC, REST APIs, microservices-style modules, OOP, MVC, Composer, Maven, layered architecture
Spring Boot Stack: Spring Data JPA, Hibernate, DTO mapping, Request/Response models, Bean Validation, global exception handling, ResponseEntity, repository-service-controller pattern, transactional services, pagination, filters and reusable ApiResponse contracts
Security & Authentication: JWT, Laravel Sanctum, token lifecycle, IP binding, rate limiting, MFA, Google Authenticator, API logging, KYC APIs
Performance & Scale: Redis, custom cache helper, queue-backed processing, async jobs, Apache MPM tuning, high-load API handling
Messaging & Notifications: AWS SQS, email queues, retry workflows, background jobs, WhatsApp chatbot and notification workflows
Database & Monitoring: SQL, stored procedures, query optimization, transaction handling, audit/reconciliation logs, Laravel Telescope, log viewers
Files & Automation: TCPDF, PHP GD Library, CSV exports, ZIP/7-Zip downloads, file upload APIs, Laravel Dusk, Selenium
Frontend & Deployment: JavaScript, React, HTML5, CSS3, jQuery, Bootstrap, admin dashboards, AWS, Apache, deployment support, API-driven web application flows

PROFESSIONAL EXPERIENCE

Senior PHP Laravel Developer | Techexcel Software Solution Pvt. Ltd. | Mumbai | 13 Jun 2022 - Present

- Architected and enhanced Techborest, a Laravel-based enterprise API platform with 400+ APIs supporting 90+ client integrations across fintech, broker technology and enterprise platforms.
- Built production-grade APIs for KYC, receipt and entry processing, client onboarding, file uploads, CSV exports, ZIP/7-Zip downloads, PDF generation, image processing, reporting and role-wise access.
- Implemented JWT authentication and Laravel Sanctum token validation with token lifecycle controls, IP binding, rate limiting, API logging and broker-specific security requirements.
- Implemented Redis caching and custom cache helper logic with Redis, database cache and file cache fallback based on environment flags.
- Worked on high-load backend processing, queue-based workflows and Apache MPM tuning to improve concurrency, request handling and reliability for heavy API traffic.
- Integrated AWS SQS and email queue workflows for asynchronous notifications, retry-based processing and non-blocking API responses.
- Implemented MFA workflows using Google Authenticator for broker-required secure access and sensitive operation validation.
- Used Swagger/OpenAPI, Laravel Telescope, log viewer packages and structured exception logging to improve documentation, debugging, monitoring and production support.
- Created TCPDF-based PDF modules for receipts, reports and business documents, with GD Library image processing and file-handling utilities.
- Integrated WhatsApp chatbot and notification workflows, and built role-wise admin dashboards to monitor entries, API requests, statuses, logs and application activity.

Junior Web Developer | Exicon Media Solutions Pvt. Ltd. | Mumbai | 16 Aug 2021 - 10 Jun 2022

- Developed a webinar management system used by pharma companies including IPCA, Mankind and Dr. Reddy's Lab for live doctor sessions, product branding and online medical engagement.
- Created CMS-driven portals with live video display, audience comments, manager PO workflows, billing modules and real-time interaction features.
- Integrated Zoom and Vimeo streaming workflows through APIs and iframes for smooth live video delivery to healthcare audiences.

SELECTED PROJECTS

Techborest - Enterprise API Platform: Built and maintained 400+ Laravel APIs for 90+ clients covering fintech integrations, KYC, receipt/entry processing, authentication, file handling, reporting, monitoring and client-specific workflows.

Spring Boot Food Order & E-commerce Backend Platform: Designed an enterprise-style online food ordering/e-commerce backend using Java, Spring Boot, Spring MVC, Spring Data JPA and Hibernate with modular APIs for customer ordering, restaurant/menu management, cart, coupon/offer engine, inventory, bill/invoice generation, delivery partner assignment, order lifecycle tracking, payment gateway flow design, refunds, admin approvals and role-wise dashboards. Planned large-scale relational database coverage with 200+ table domain thinking, normalized master/transaction tables, audit tables, status logs, SP/reporting requirements, settlement reports, tax/GST billing reports, partner payout reports and daily order reconciliation. Implemented

professional backend patterns using Controller-Service-Repository layers, DTOs, validation, global exception handling, transaction management, pagination, search filters and standard ApiResponse structures for reusable production-grade modules.

Techrisk - Broker Risk Management System: Developed broker dashboards for market conditions, security performance, portfolio risk, exposure and diversification; automated bhav file processing from NSE, BSE, MCX and NCDEX using Laravel Dusk and scheduled jobs.

Smart API, Cache & Queue Framework: Created high-load API patterns with Redis/database/file cache fallback, structured logs, retry workflows, queue-backed processing and production-ready exception handling.

WhatsApp Chatbot & Notification Integration: Integrated WhatsApp chatbot workflows, email queue processing and SQS-backed asynchronous communication for business use cases.

DoctorHealthChecker - Healthcare System: Built a healthcare platform for Somaiya Hospital with admin, MR, Pythokind, Thyrocare and manager roles, appointment scheduling, reminders and test-result workflows.

Webinar Management System - Pharma Domain: Created doctor webinar portals with CMS setup, live streaming, commenting, PO management and billing support for pharma clients.

EDUCATION

Bachelor of Computer Science, Mumbai University | 2019 - 2021 | First Class Distinction
Higher Secondary School, Maharashtra State Board | 2017 - 2018 | Second Class Distinction

PROFESSIONAL FOCUS

Backend API development | High-load Laravel systems | Enterprise Spring Boot applications | Food order and e-commerce backend flows | Fintech and broker integrations | API security | Redis caching | Queue-backed processing | SP/reporting logic | Payment flow design | Production debugging | Automation | Documentation | Enterprise client support
