

UJWAL UMESH DANGI

Senior Software Engineer | Java Spring Boot | Microservices | Distributed Systems

Mumbai, India | +91 7738605499 | ujwaldangi335789@gmail.com | ujwaldangij.github.io/portfolio/

PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of backend engineering experience building secure, scalable API systems for enterprise and financial-services domains. Strong Java Spring Boot focus across REST APIs, microservices-style architecture, Spring MVC, Spring Data JPA, Hibernate, Spring Security, JWT/OAuth2-style authentication, Redis caching, async processing, queues, SQL optimization, observability and production debugging. Delivered and maintained 400+ APIs across 90+ enterprise integrations including Paytm, PhonePe, Axis Bank, HDFC Bank, NJ, Dhan, CoinSwitch Kuber, KIFS and Indira. Positioned for senior Java backend roles requiring system design, API ownership, migration of large backend platforms into Spring Boot services, secure integrations, high-load troubleshooting and clean production engineering.

CORE ENGINEERING PROFILE

- Java Backend Engineering: Java 8+, OOP, Collections, Streams, exception handling, multithreading basics, ExecutorService concepts and clean service-layer coding.
- Spring Boot Development: REST API design, Spring MVC, Controller-Service-Repository flow, DTO/request-response contracts, validation, ResponseEntity and reusable response models.
- Microservices & System Design: service boundaries, modular backend design, API gateway-style thinking, inter-service communication, idempotency, retry handling and failure isolation.
- Security Engineering: Spring Security concepts, JWT, OAuth2-style flows, token lifecycle, RBAC, IP binding, rate limiting, MFA, secure file handling and audit-friendly API logs.
- Data & Transactions: Spring Data JPA, Hibernate, SQL, joins, stored procedures, indexing awareness, transaction management, pagination, filters, reconciliation logs and reporting models.
- Scale & Reliability: Redis caching, queue-backed processing, AWS SQS, async/background jobs, concurrency troubleshooting, slow query analysis and production incident debugging.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, REST API engineering, backend integration development

Spring / Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security concepts, REST APIs, DTO mapping, validation, global exception handling, transactions

Architecture: Microservices-style modules, layered architecture, API contracts, service decomposition, reusable components, admin workflows, integration design

Security: JWT, OAuth2-style auth, RBAC, token validation, IP binding, MFA, rate limiting, secure API logging, audit trails, secure upload/download APIs

Data: SQL, stored procedures, joins, indexing, query optimization, normalized relational design, master/transaction tables, audit and reconciliation data models

Performance / Async: Redis, cache fallback strategy, AWS SQS, queues, retry workflows, async jobs, background processing, Apache tuning exposure, high-load API support

Tools: Git, Maven, Postman, Swagger/OpenAPI, AWS, logs, production debugging, Selenium automation, CSV/ZIP/PDF/file-processing utilities

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Techexcel Software Solution Pvt. Ltd. | Mumbai | Jun 2022 - Present

- Own and enhance Techborest, an enterprise backend platform supporting 400+ APIs and 90+ client integrations across financial services, broker technology and enterprise ecosystems.
- Designed secure REST APIs for KYC, onboarding, client operations, receipt/entry processing, reporting, file upload/download, CSV exports, ZIP/7-Zip processing, PDF generation and role-wise admin workflows.
- Worked on production integration flows for Paytm, PhonePe, Axis Bank, HDFC Bank, NJ, Dhan, CoinSwitch Kuber, KIFS and Indira with client-specific API contracts, validation rules and operational requirements.
- Modernized legacy backend modules into Java/Spring Boot service design: controllers, services, repositories, DTO validation, global exception handling, transaction boundaries, pagination and standard response contracts.
- Implemented authentication and authorization patterns using JWT/token validation, RBAC-style access checks, IP binding, MFA, rate limiting, broker-specific rules and structured API audit logs.
- Built Redis-based caching and cache fallback strategy to improve response time and keep business APIs reliable across different deployment environments.
- Implemented queue-backed processing, AWS SQS workflows, email queues, retry handling and background jobs for non-blocking API responses under heavy business operations.
- Handled production debugging for high-load backend issues: request lifecycle tracing, exception logs, slow queries, concurrency symptoms, Apache tuning exposure and incident-level fixes.
- Created reporting and document modules including receipt PDFs, business reports, CSV outputs, audit-friendly exports and backend file-processing utilities.

Junior Software Engineer | Exicon Media Solutions Pvt. Ltd. | Mumbai | Aug 2021 - Jun 2022

- Developed healthcare and pharma platforms used by companies including IPCA, Mankind and Dr. Reddy's Lab for live doctor sessions, product branding and online engagement.
- Built CMS-driven portals with live video display, comments, PO workflows, billing modules, admin operations and real-time interaction features.
- Integrated Zoom and Vimeo workflows through APIs/iframes and supported stable event delivery for healthcare audiences.

SELECTED PROJECTS

Techbore - Enterprise Backend Modernization Platform

- Worked on a large enterprise backend ecosystem with 400+ APIs, 90+ integrations, security controls, operational reports, API logs and client-specific business rules.
- Domain modules covered KYC, onboarding, receipts, entry processing, role-wise access, file APIs, reporting APIs, export utilities, broker validations and admin monitoring.
- Java modernization positioning: mapped large backend modules into service-oriented design using Spring Boot, Spring MVC, JPA/Hibernate, DTOs, validation, transactions, repositories and centralized exception handling.
- Reliability patterns included Redis caching, queue processing, AWS SQS, retry workflows, async notifications, audit logs, error tracking and production debugging.

Java Spring Boot Banking & Enterprise API System

- Designed Java Spring Boot modules for customer onboarding, account-style master data, transaction-style workflows, admin approvals, documents, reports and operational dashboards.
- Implemented clean Controller-Service-Repository structure with entities, DTOs, Bean Validation, global exception handler, ResponseEntity, transactions, pagination and search filters.
- Planned relational data model with master tables, transaction tables, status logs, audit tables, document records, reconciliation reports and daily operational summaries.
- Added security-first API thinking with Spring Security concepts, JWT/OAuth2-style auth, RBAC, request validation, secure file handling, audit logs and standardized error responses.

Spring Boot Food Order & E-commerce Backend Platform

- Designed enterprise-style APIs for customer ordering, restaurant/menu management, cart, offers, inventory, billing, delivery assignment, refund references and order lifecycle tracking.
- Used layered architecture with controllers, services, repositories, JPA entities, DTOs, validation, transactions, pagination, filters and reusable ApiResponse contracts.
- Modeled 200+ table domain coverage including master tables, transaction tables, audit/status logs, GST billing reports, settlement-style reports and daily order reconciliation.

Risk, Reporting & Market Data Processing

- Built broker dashboards for market conditions, security performance, portfolio risk, exposure, diversification and automated operational reporting.
- Automated bhav file processing from NSE, BSE, MCX and NCDEX using scheduled backend jobs, data imports, exception handling and dashboard APIs.

Java Microservices & Distributed Backend Design Practice

- Designed service boundaries for user, authentication, onboarding, document, reporting, notification and admin modules with independent request/response contracts.
- Prepared API gateway-style routing, centralized authentication, downstream service validation, correlation-id logging and service-level error handling patterns.
- Used distributed-system thinking for retries, duplicate request prevention, timeout handling, background jobs, queue consumers and failure recovery for long-running operations.
- Designed production-friendly observability with structured logs, request tracing, error dashboards, API documentation, audit records and operational status tracking.

Secure Enterprise Integration Layer

- Designed integration contracts for external platforms with header validation, request signing/token validation concepts, status-code mapping, response normalization and exception-safe API wrappers.
- Handled sensitive workflows with role-wise authorization, secure document access, input validation, upload constraints, API logs, audit trails and reconciliation-friendly reporting outputs.
- Built reusable helper patterns for HTTP-style integrations, retry-aware processing, standard error responses, operational logs and support-friendly debugging.

SYSTEM DESIGN & INTERVIEW-READY AREAS

Microservices design | Spring Boot service layering | Spring Security | OAuth2/JWT | API gateway concepts | Redis caching | queues | AWS SQS | async processing | retry/idempotency thinking | transaction management | pagination/filtering | SQL optimization | audit logs | observability | production debugging | high-load API support | backend modernization to Java services

EDUCATION

Bachelor of Computer Science, Mumbai University | 2019 - 2021 | First Class Distinction
Higher Secondary School, Maharashtra State Board | 2017 - 2018 | Second Class Distinction
